DATE MAILED: 04/08/2004

3

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/671,250

Applicant(s)

LEE, MICHAEL C.G.

Examiner

Thomas M Ho

Art Unit

2134

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on 28 September 2000.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

1. **Claims 1-21 are pending.**

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 21 is an improperly formed dependent claim because it is dependent upon itself.

3. Claim 21 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For the purposes of examination, claim 21 shall be read as being dependent on claim 17.

“The computer readable medium of claim 17 further comprising...”

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the

Art Unit: 2134

international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-2, 4-6, 10-13, 17-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Baum et al., US Patent 6,400,707.

In reference to claim 1:

Baum et al. (Column 6, lines 51-62) & (Column 7, lines 42-52) & (Column 5, line 50 – Column 6, lines 8), discloses a firewall for Internet protocol packets carrying data for a real-time Internet application, each of said Internet protocol packets being associated with any one of a signaling channel, a control channel, or a bearer channel of said real time Internet application, the firewall comprising:

- An application proxy and a packet filter,
- The firewall applying the Internet protocol packets associated with the signaling channel and the control channel to the application proxy, and the firewall applying the Internet protocol packets associated with the bearer channel to the packet filter,

where the signaling channel is the channel which contains the Q.931 message (Column 6, lines 51-62) used to establish the connection, the control channels to the application proxy are the channels of data sent by the control processor, including the RS232 messages to reconfigure the packet filter (Column 7, lines 42-52), and the bearer channel contains the information of the transmission itself, the packets that are filtered, by the firewall packet filter. (Column 5, line 50 – Column 6, lines 8)

Art Unit: 2134

In reference to claim 2:

Baum et al. (Column 4, lines 15-21) disclose the firewall of claim 1 wherein said real-time Internet application is Voice over Internet Protocol (VoIP)

In reference to claim 4:

Baum et al. (Column 4, lines 15-21) discloses the firewall of claim 1 wherein said real-time Internet application is voice over Internet.

In reference to claim 5:

Baum et al. (Column 4, lines 15-21) discloses the firewall of claim 1 wherein said real-time Internet application is voice messaging over Internet, where the messages are sent in packets.

In reference to claim 6:

Baum et al. (Column 5, line 50 – Column 6, lines 8) & (Column 7, lines 42-52) discloses the firewall of claim 1 wherein the application proxy instructs the packet filter as to which Internet protocol packets associated with a particular bearer channel to enable and disable for the duration of a session of said real-time Internet application, where the application proxy instructs the filter by specifying which port, IP addresses, source, and destination to allow or disallow.

In reference to claim 10:

Art Unit: 2134

Baum et al. (Column 7, lines 42-52) discloses the firewall of claim 1 further including a control logic process for specifying the operating parameters of the firewall, where the control logic process is performed by the control processor.

In reference to claim 11:

Baum et al. (Column 3, lines 56-65) & (Figure 1) discloses the firewall of claim 1 wherein said application proxy and said packet filter are housed in any one of a dual homed commercial workstation, a general purpose workstation, a dedicated hardware firewall appliance, or an application specific integrated circuit, where the application proxy and packet filter are housed in a general purpose workstation and application specific integrated circuit.

In reference to claim 12:

Baum et al. (Column 7, lines 15-52) discloses a method of protecting a computer network transmitting and receiving Internet protocol packets formatted in accordance with a real-time Internet protocol, each of said Internet protocol packets being associated with any one of a signaling channel, a control channel, or a bearer channel, the method comprising the steps of:

1. receiving a stream of Internet protocol packets, where the internet protocol packets are formatted by a protocol that identifies the packets into signaling, control, and B-channels.
2. applying the Internet protocol packets associated with the signaling channel and the control channel to the application proxy, where the application proxy is the

Art Unit: 2134

gateway and control processor to analyze signaling packets and register the signal.

(Column 6, line 66 - Column 7, line 16)

3. applying the internet protocol packets associated with the bearer channel to the packet filter, where the packet filter filters the packets of the B-channels which contain the actual transmission information for fast speed. (Column 7, lines 42-52)

In reference to claim 13:

Baum et al. (Column 7, lines 42-52) discloses the method of claim 12 further comprising the step of the application proxy instructing the packet filter as to which bearer channels to enable and disable for the duration of an Internet application session utilizing said real-time Internet protocol, where the application proxy instructs the packet filter as to which bearer channels to enable or disable by specifying the port, IP addresses, source, and destination.

Claim 17 is rejected for the same reasons as claim 12.

Claim 18 is rejected for the same reasons as claim 13.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2134

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 3, 7-9, 14-16, 19-21 rejected under 35 U.S.C. 103(a) as being unpatentable over Baum et al.

In reference to claim 3:

Baum et al. discloses all of claim 3 except wherein said real-time Internet application is fax over Internet.

The examiner takes official notice that real-time fax applications over the internet were well known to those in the art.

It would have been obvious to one of ordinary skill in the art at the time of inventions to have a firewall also filter faxes through the internet, in order to apply the same security measure to internet fax transmissions as one would with other kinds of internet transmissions.

In reference to claim 7:

Baum et al. fails to explicitly disclose the firewall of claim 1 further including a Network Address Translation (NAT) process to translate any Internet Protocol (IP) addresses, Transmission Control Protocol (TCP) port numbers or User Datagram Protocol (UDP) port numbers contained at layer 3 and later 4 of the Internet protocol packets associated with the signaling channel, the control channel and bearer channel.

The examiner takes official notice that use of NAT or Network Address Translation a process to translate any IP addresses, TCP port numbers, or UDP port numbers with any data packets was well known to those of ordinary skill in the art. NAT translation is necessary because local networks often have different differently assigned addresses than external networks such as the Internet. Furthermore, NAT is necessary for networks in which all traffic on a local network is to be directed through a single gateway such as a firewall. In these systems, a firewall itself may serve as the sole address, and may route the data packets it receives by translating them into their respective local addresses before forwarding them to a computer on the LAN. Examples of these systems and the use of NAT is disclosed in

- US Patent 6,650,641
- US Patent 6,006,272
- US Patent 6,119,171
- US Patent 5,793,763

It would have been obvious to one of ordinary skill in the art at the time of invention to apply a Network Address Translation policy to translate any Internet Protocol (IP) addresses, Transmission Control Protocol (TCP) port numbers or User Datagram Protocol (UDP) port numbers contained at layer 3 and later 4 in order to allow Internet Protocol packets received from the outside to reach their destination, specifically by the proper ports and addresses, on the internal network guarded by the firewall.

Art Unit: 2134

In reference to claim 8:

Baum et al. fails to explicitly disclose the firewall of claim 1 further including a Network Address Translation (NAT) process to translate any Internet Protocol (IP) addresses, Transmission Control Protocol (TCP) port numbers of User Datagram Protocol UDP port numbers contained at layer 7 of the Internet protocol packets associated with the signaling channel and the control channel.

With regards to the official notice as taken above, it would have been obvious to one of ordinary skill in the art at the time of invention to translate any Internet Protocol (IP) addresses, Transmission Control Protocol (TCP) port numbers or User Datagram Protocol (UDP) port numbers contained at layer 7 in order to allow Internet Protocol packets received from the outside to reach their destination, specifically by the types of content and session request such as FTP, gopher, or telnet, on the internal network guarded by the firewall.

In reference to claim 9:

Baum et al. fails to explicitly disclose the firewall of claim 8 wherein said application proxy instructs said NAT process to operate for the direction of a session of said real-time Internet application independent of data traffic flow.

With regards to the official notice as taken above, it would have been obvious to one of ordinary skill in the art at the time of invention to apply a Network Address Translation

Art Unit: 2134

policy to the firewall of Baum in order to allow Internet Protocol packets received from the outside to reach their destination on the internal network guarded by the firewall.

Claim 14 is rejected for the same reasons as claim 7.

Claim 15 is rejected for the same reasons as claim 8.

Claim 16 is rejected for the same reasons as claim 9.

Claim 19 is rejected for the same reasons as claim 14.

Claim 20 is rejected for the same reasons as claim 15.

Claim 21 is rejected for the same reasons as claim 16.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas M Ho whose telephone number is (703)305-8029. The examiner can normally be reached on M-F from 8:30am – 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory A. Morse can be reached at (703)308-4789. The fax phone numbers for the organization where this application or proceeding is assigned are (703)746-7239 for regular communications and (703)746-7238 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)306-5484.
